- Led the design, development, and deployment of ML models to enhance wafer defect identification.
- Researched novel methods using deep learning and generative AI to detect multi-defects and anomalous patterns that occur during the semiconductor manufacturing and probe process
- Utilized SoTA conditional variational autoencoders (VAEs), diffusion models and vision transformers (ViT) for faster processing and high detection accuracy
- Presented the project impact and outcomes to the VP of Engineering.
- Recipient of the **Micron Innovation Award**, marking the first step toward patent filing

Graduate Research Assistant June 2022 - Jan 2023
UW Bothell: Computation Behavioral Modeling (CBM) Research Lab
Advisor: Dr. Afra Mashhadi

- Inspired by societal communication and behavior in social media, defined the research around the area of studying nostalgia or reminiscent behavior on social media using natural language processing (NLP)
- Built traditional NLP models for classifying nostalgic conversations on the Twitter platform
- Applied NLP feature strategies and implemented transformer models such as RoBERTa, DistilBert, ensemble models, and ensemble-feature models to improve detection accuracy to 0.96 (Micro F1-Score)
- Mentored two undergraduate students to prepare exhaustive amounts of Twitter data
